

# HARNESS THE POWER OF AI

## With Microsoft Power BI

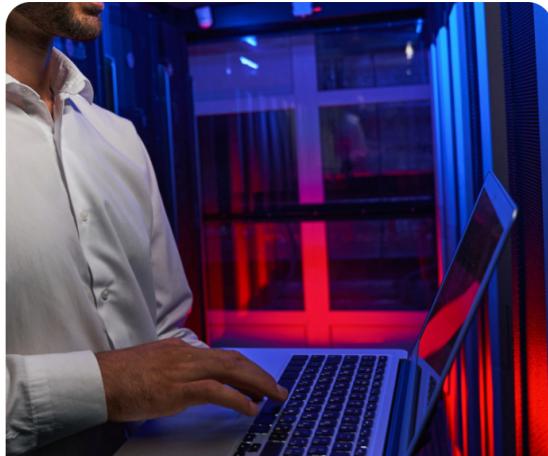

### ABOUT

## ONE POWER CLOUD

OPC is a business intelligence solutions provider that specializes in data warehousing and the development of BI tools utilizing the Microsoft® Power Platform. In addition to offering training and Power Platform activation consulting services, the company provides a complete BI solution that can be fully or sectionally outsourced.

With 25 years' experience in the Automotive software space, the business has a proven track record of assisting Retail Dealer Groups and Importer organizations with their management systems and data management and reporting requirements.

From DMS consulting to Business Intelligence, understanding the process and the user, we combine our technical prowess with professional, seasoned, consultancy skills, to bring you the best business intelligence available to the Automotive market today.

### OUR SERVICES

OPC's business intelligence solutions for top automotive retail and importer organizations include a range of features such as a Full DMS integrated Dealer group Operational Dashboard, Full DMS Integrated Financial Management dashboard, and department-specific Stream focused options for Vehicle Sales, Parts Sales, and Service Department.

Additionally, we offer bespoke development with additional data source integration such as Marketing with Google analytics and RPA integrations for Auto floorplan recons. If you need help with administering

your own Power BI tenant, our team is ready to assist.

## WHAT IS **POWER BI**

Power BI from Microsoft is a set of business intelligence tools that run in the cloud, allowing you to analyse your data through practical visualizations and interactive reports. With Power BI, you can consolidate all your essential applications and databases into a single dashboard, where you can efficiently create, modify, arrange, and share informative reports on any device you choose. With real-time access to actionable insights, you'll be able to optimize internal business operations and have an edge over your competition.

## Benefits of **POWER BI**

Continuously updated powerful dashboard graphs and visualizations.

A single BI tool that offers the best of both worlds in terms of ease of use and performance.

Our solution analytics feature and columnar database support for tabular data.

The use of Data Analysis scripting for creating measures and columns, which enables business analysts to build reports that meet the organization's needs.

We are the official **BI SUPPLIER** for

## **TRAINING & SUPPORT**

Our support services include managing BI solutions through data warehouse monitoring, daily data refresh management, user visuals and report support, user training, and activation, access, and license management. We are committed to providing efficient and comprehensive support for maintaining well-structured data management systems to ensure up-to-date and easily accessible data for our clients.
