

We support the motor industry with unique & environmentally friendly & innovative products

### Crystal Fusion™: Ceramic Coating

Protecting Your Vehicle From UV Damage/Oxidation.

Crystal Fusion™ Premium Ceramic Coating has been engineered to protect painted surfaces of a vehicle against contaminants and prohibit them from attaching to the surface by means of a super hydro-phobic barrier. It helps the painted surfaces of the vehicle stay cleaner for a longer period. Dirt, Grime, Insects, and Acid Rain have a hard time sticking to the treated surface.

### Crystal Fusion™: Superior Waterless Car Wash

Waterless product that liquefies the dirt off your vehicle-saving water.

Crystal Fusion™ Premium Ceramic Coating has been engineered to protect painted surfaces of a vehicle against contaminants and prohibit them from attaching to the surface by means of a super hydro-phobic barrier. It helps the painted surfaces of the vehicle stay cleaner for a longer period. Dirt, Grime, Insects, and Acid Rain have a hard time sticking to the treated surface.

Added protection for your windsreen.

Crystal Fusion™ adds an enhanced layer to your windsreen to enhance visibility on the road. It is an elite windsreen application that molecularly fuses with glass to form a hydrophobic barrier.

## Crystal Fusion™: Graphene Coating

What makes The Crystal Fusion™ Graphene Coating different?

Formulated to provide a layer of protection on its own, or as an enhanced booster of existing protection. Extreme gloss, super hydrophobic formulation that chemically bonds with the car's paint and creates a new layer of protection forming a semi-permanent shield with the paint. Easy to use spray and wipe product.

## About Crystal Fusion

What is the nature of glass?

When we think of glass, we think of a surface that's perfectly smooth, clear and transparent. But, at the molecular level, glass is porous with microscopic hills, peaks and valleys that refract light and collect tiny particles. This irregular plane causes a strong adhesion with water and creates microscopic "contact points" in the glass.

Crystal Fusion enhances and protects your windsreen.

More than just a coating that can peel and blister over time, Crystal Fusion molecularly fuses with glass to form a hydrophobic barrier. It enhances visibility in bad weather and strengthens the windshield. As a result, water beads up and rolls away and damage from small road debris is greatly reduced.

The advantages of Crystal Fusion technology are perfectly clear...

Improves clarity and visibility to extend driver reaction time

Significantly reduces Night Glare

Allows insects to be easily washed away

Makes ice and snow much easier to remove

Protect against acid rain, corrosion and mineral buildup

## Why Crystal Fusion

Safety

Clarity

Durable

Quality

Economical
